It could not have been done without:

Stephan Henrich,
Ezio Blasetti,
Gwyllim Jahn,
Danielle Willems,
Vongsawat Wongkijjalerd,
Myrtille Fakhreddine,
Daniela Mitterberger,
Katrin Hochschuh,
Tiziano Derme,
Agatha Partyka,
Chantale,
...
and many others

(see full credits at the end of the book)
We are very tired already

0.0 And by annihilating the body humans pretended to become apolitical
0.1 Places of physical resistance were losing importance What mattered always was the mind and its amusement #entertainment #momentaryescapes #bodyindenial (did physical love equal freedom in 1984?)
0.2 We were now to reveal entrapments

...

1.0 This is a call for rituals
For screams and procedures
Control, outlets
1.1 Remember
When man’s life was organized through a succession of rituals Where you would find your place as an individual
Protocolled duties soaked with meaning to allow for freedom within
Also, the psycho-physical territory where you could play, trespass reason’s limits
One would allow for madness and meet what madness could give
1.2 Allow for gestures, crafted movements, repetition, exhaustion

Architecture is the crime scene

2.0 Hell and Paradise are not places but paths, journeys for remembrance, placeholders for memorising virtues and vices, instructions and signals to follow or avoid #thegourneyandnotthedestination
2.1 We always meant to start with language
The format is content, the path destination, the place a device, a Pilgrim’s progress
Making ways to reach mind-places, images, ideas, and their associations
2.2 Disposable, re-usable, able to host even contradictory discourses #placesasdatabases
Here we misplace #misplacement
3.0 However, we need to touch, to confront matter
We need the senses; hearing, caressing, little physical hurts
... Do we produce or do we filter senses?
3.1 The material will lead you somewhere you wouldn’t expect at first
3.2 We have had enough of forms and formulas
We are to corrupt the mind, almost a technological device, with sensual friction and norm transgression
3.3 My idols are hackers; technological transgression directly problematic, hence political
Buildings like weapons depending on and servile to technology and its display

4.0 We should always quote: Soul is only a word for something about the body (Nietzsche)
4.1 We should remember: Body and spirit are not inscribed in a precise private space but in a game of spaces, forces, enigmas, and mysteries between man and his dead ancestors — this would include animals —
The individual is the ephemeral reunion of elements of diverse origins, of which some pre-existed its birth and will survive its death in different combinations defining other individualities
4.2 In some ancient societies there is a continuity in the interpretation of the episodes of dreaming and waking: the body when awaking feels all the tiredness of the travel made by its double, as the newborn body wears the mark of the ancestral elements which are reincarnating in him
The body does not have strict limits, neither inside nor outside, it is continuous
Becoming … #transtransfertransfixedandintrance

if one allows for what one calls madness more freedom is welcomed

5.0 Man needs blur
Accidents
Solitudes
We demand permission to be sad, desperate, failures; there should be places for rituals: blood-streaked, oozing, diseased
Places where you can finally feel disgusted
5.1 Meanwhile buildings nowadays take good care of making you dependent; and they accomplish this easily
Poster hangers; buildings as ad displays
Desire of meat, of flesh, of skin and sex — when museums are malls, what else could you build — that you will not
obtain, so you can buy something instead, enslaving you to the point there is no way to realize it any longer.

You have enough names for disorders, not enough places

6.0 Mindscapes
6.1 Is there more to a shelter than to protect the body? The body and its double, the spirit and its double as well
6.2 Perception is never neutral; it is infested with our own fears and desires; and so are the places we inhabit. The world we inhabit, first our pathologies
6.3 What about rebirth, coming out, weaning, phases of transformation, mediation, an attempt of dialogue, of communication ... a rite of passage

Make it make it don’t fake it — fake it ’till you feel it

7.0 Follies #psychoarchitecture
The celebration of one’s pathologies, phobias, anxieties, neurosis, psychosis ... to allow for madness to be lived, to push a logic ...
This logic has to become uncomfortable
7.1 Small scale is a way to build it
7.2 Be beyond narration (depart from Ballard’s Vermillion Sands, from the absurd mindscapes of Borges)
7.3 In the becoming, without being ... the shelter is a device always in operation, a medium, a manifestation of the mind perhaps ... perhaps not much else
An exo-psyche, a space of negotiation between the self with its pathologies, its fears and the outside, the other
If the main subject goes, the shelter goes
But all are fleeing ... none of the characters truly belongs here, in that sequence
It is a stolen piece of time ... a fragment of place, a sketch of identity, a glimpse into a plausible story
7.4 We barely ask for permission
We extract substances, transform, propose, leave behind
7.5 It persists after we depart; turns problematic
Soon the embodiment of a conflict

Overexploited over-solicited bodies
8.0 Metaphors and/or #mythomaniaS
It seems very literal, dangerously symbolic
Metaphors as vehicles, #mythomaniaS as mind-places
8.1 Bio-eco-consumer and/or mechanical-animal
Our body-cyborg stimulated, electrified, chemically controlled
(kubernēsis is the 'action of manoeuvring a ship')
8.2 The mind-machine-making-myths
Trans – transfer – transfixed & in trance, we link it via real-
time technologies to reach the territories of fear, when the
body becomes tense, animal, endangered

Warp Stabilize – Gamma Correct – Export

9.0 To the solitudes in the network, to each ghost in each
shell
Permu(ta)ted bodies, not quite digital, at least mediated,
each lost in its own way
9.1 We are children of screens, advertisements and film, our
world mediated from birth till death
Do we believe: now everything is cinema
9.2 Millennials, born once the world was already over, made in
the network, the enigmatically blank generation, looking at
heroic figures of the isolated past, while drooling over per-
petual fun and superficial connections, the LIKE generation, my
generation, Gen N-E-Y … born within images, slave to the guard-
ian of sleep … generation of happily, voluntarily servile,
comfortably numb consumers, while cultural forms get smoother
and smoother, narrower and narrower

The reasons behind this work are unknown to me, but the path it is taking, both demonstrative and absurd, makes this journey, the vectorization of the emergences coming from non-formulated hypotheses, the only reason possibly able to validate them.

There is no plausible psychological explanation, nor a causal connection between the Object and the Situation. These two are satisfied by their unstable equilibrium, between ‘the space’ (not to be understood in the Modern sense) and the biological body. They share a psyche, non-dissociable from a state of dependency, of correlation, which cannot be described as a domination system, but as belonging, co-belonging.

The couple’s space-body isn’t dedicated to a projection, of one onto the other, but instead proceeds by co-extrusions, co-existences … in a fold of Artaud. The crime scene is crossed by intimacies-extimacies(2), and the architecture snakes in and through their flux and reflux.

The shelter is no longer dedicated to insularity, a sort of bunker at the service of a vague attempt at the safety of the biological body … it is itself coming from its biologies and allows via its apparatus the certainty of transactions, of raw materials and subjectivation … a small osmotic machine, symbiotic and psychic … the
places, the bodies and the misunderstandings vibrate through their reciprocity ... their catatonic stutterings.

We are pulled and pushed in a contradictory mode of exchanges, consubstantial to the planet’s equilibrium-disequilibrium ... where we cannot romanticize the lost natures, the idealized Holocene, condemned now to evolve in the Anthropocene, in a thermodynamic flux, unstable and improbable ... in additive-subtractive mode ... where we are definitively shaping the planet with our substances, be it physical, physiological, psychological, (...), where even our psyche has to be counted in the balance(3).

The natures of this Anthropocene are a source of feedback-backlash vibrations, for a kind of eco-machinist-masochism, in the double paradox of Labov, both observed and observing ... object and subject, actor and spectator ... vector of its “mise en abyme” ...

In positive entropy, no reverse is possible ...

... Psychotic machines, psychotic apparatuses and fragments ... Bodies in verse, bodies-becoming ... are meeting in the stories of their symptoms ... plausible. The “forbidden” is reintroduced as a possible, and, what was rejected or considered as an improper ingredient within our computer graphic idealization of the world is coming back like George Bataille’s substances ... in a repulsive “curiouser and
curiouser” affinity, in the pursuit of the notion of risk of Ulrich Beck(4) ...

The human being is no longer consid-
ered as a bio-eco-consumer but is drift-
ing into a psycho-computing-an-
imal which deﬁ(n)es its situation and
condition of living simultaneously
with the architecture’s emergences,
as a co-dependency, a co-relationship ...
for a Siamese twin alienation. Par-
a-psychoses, projections of the mind,
delusions and singularities seem more
relevant: Lines of Subjectivities vs Functionalist, Bodies vs Body, Sub-
stances vs Shape, Scenario vs Concept ...
‘Pataphysics(5) vs pseudo-Scientifc
Positivism ... Vanitas(6) vs Naivism ...

Environments and paranoia as symptoms of an inner condition, in a constant
exchange between narrative and emer-
gence, in a stuttering process: a sto-
ytelling manifested in the creation of a
fiction which uses a fragment as a
by-product and where a material struc-
ture with its physical characteristics
takes shape and instructs the story.
Each scenario is a condition of sol-
itude in relation to a “symptomatic
symptom” structure, where the frag-
ment is the very “raison d’être” of his/her emotions: the true story of an old Indian book collector exiled from his community on the suspi-
cion of atheism, who ﬁnds refuge in
a tear-collecting shelter, made of
stones and lachrymatories (“... Would Have Been My Last Complaint”); a sci-
entist captured in Anthropocene en-
tropy, condemned to accept metem-
psychosis exchanges, according to the ﬁrst principle of thermodynamic
law ("Although (in) hapnea"); a monster-boy endomorph constantly overfed, protected in a claustrophilic antidote-jacket from the love excess of his incestuous mother ("(beau)strosity"); the suspended time of Ariadne floating between two periods, two macho spirals, testosteroned Theseus and alcoholic Dionysus ("Terra Insola"); the feral child, innocent, naïve, and obscene, in the deep jungle, auscultated by scientism and voyeurism ("the Offspring"); the "difference and repetition" of an affective alienation become caged food in the pursuit of Gilles Deleuze ("∑days"); a postculture spasm ... in a mud-dirt-turd where substances (human psyche and rejections) meet in their various states of chemical transformation ("concrete(I)land"), ...

... producing a shelter which produces a movie and the movie at the origin of a shelter ... as a Siamese twin interlaced production, between narration and topology, able to cross fabrication expertise and human pathologies to create the condition of a passage, for a navigation between allusive realism and speculative fiction ... intertwined, interlocked as a storytelling developing two collateral effects, two artifacts: one by the potential to develop a fiction using an emerging structure as a by-product, and the other on the tangible and tactile world by shaping an emergence which will "construct" the "raison d'être" of the story. The relationship, the permanent flux between the architecture becoming a Prop of another production, in another discipline, and
its own real and fictional footprint (un)resisting its own erosion, produces an indistinguishable transitory and transactional process of a Siamese dialogue … where the two are slipping in an osmotic, a symbiotic stuttering … (schizoid protocols within miscibility and autonomy …), at the base of the birth of some twinned fictional identities … Through the mythomania of each situation, of each character … transforming environments with their para-psyches, confusing Plato’s grotto, trajectories, lines of fiction and physicality. The architecture fragments are becoming the cartography of their mind from where they can accept the shifting, the drifting … as a receptacle of their paranoia, but simultaneously as a vector, a shelter of their emotions. Reprogramming architecture with psychism … fear and emotions, relationship aesthetic and exquisite corpses / placed into the abyss … to share this schizoid goal … storytelling and fabrication, but also to create a laboratory, able to provide the conditions for using and manipulating Sciences and Fictions(7).

On the side, experiences are undertaken in Bangkok, through a fab-lab, M4, including a 6-axes robot, multiples nozzles, a Real Sensor Interface … a unit of fabrication as an architecture “agenda,” confronted with different biotopes and feedback … in a permanent challenge to articulate the contingencies of logic between the instruments-tooling … as computation, as robotic, as “de-expertise” of the design process … with … at the opposite … the discovery of the potential
of a masochism adaptation, for a kind of “Situationist” claim or debt ... in a strategy-tragedy of correlations ... of co-dependencies ... for prototyping discourses and substances, material and immaterial(8) ...

In our merchandising time, when even the internet is becoming an egocentric-GAFA-TV-Show ... through algorithms on cookies, likes, smilies ... without omitting the mathematic codes at the origin of the Subprime and Data crisis ... we are only left with mental spaces to defend ourselves ... reptilian atavisms ... hostages to the society of the spectacle ... mirror of our own reflection ... selfish-selfies ... in self-contemplation ...

What else could we do than to oppose this system’s obscenity, the obscenity(9) of our pathologies ... generated by this very system, affected by an impossibility to the world, facing these multiple disorders ... to say, to make-say and make-know ... that we as well are pathogen elements ... of this very disorder, but in a critical mode, activist, solitary ... to produce with this repulsion ... this rejection ... in a metabolised loop ... constitutive of the obscene chain ... of these little tales.

Yes, we are only left with obscenity in order to say, to make, to make-say and make-know.

This is what we offer here ... our pathologies as paranoid-criticism ... the obscenity is not so much the subject than the voyeurism apparatus which forces us to look at it, frontally ...
In front of the miserabilism of cretinous niches with their hypocritical formulas(10), we have to re-evaluate what we used to call “Design”(11) as a process of synaesthesia, of knowledge … crossing the multiple conflicts and embarrassing waste of ideology, criminal positivism, voluntary ignorance, performative cynicism … To secrete from its ambiguity, ambivalence … even nonsense … absurdity …

… Where some words are definitively “suspect” relative to daily routines / Expertise, Accuracy, Performance, Optimization, Communication, Futuristic, Future, Innovation, Speculation, Improvement, Absolute, Truth, Parametric, Post-Human, Positivism … as the Grail “onanism” and at the opposite, other words are vehicles for some kind of legitimacy … innocently injected into the daily routine / dirty, filthy, X-rated, explicit, lewd, rude, vulgar, coarse, crude, offensive, immoral, improper, impure, off-color, degenerate, depraved, debauched, lubricious, indecent, smutty, salacious, carnal, lascivious, licentious, bawdy, and Nostalgia, Melancholia, Metaphor, but also scatological, profane, porn, skin, vile, foul, atrocious, outrageous, heinous, odious, abhorrent, abominable, disgusting, hideous, offensive, objectionable, repulsive, revolting, repellent, loathsome, nauseating, sickening, awful, dreadful, terrible, frightful and repugnant …
Footnotes

(1) Referring to Michel Foucault ("un ensemble hétérogènes d’éléments qui combine des discours et des institutions, des savoirs et des savoir-faire, du dit et du non-dit, et qui oriente les attitudes et les esprits"). This notion has been re-developed by Giorgio Agamben ("J’appelle dispositif tout ce qui a, d’une manière ou d’une autre, la capacité de capturer, d’orienter, de déterminer, d’intercepter, de modeler, de contrôler, et d’assurer les gestes, les conduites, les opinions et les discours des êtres vivants"). Foucault was developing apparatuses through a strategy of knowledge facing the 'power' (both strength and political power), including the reciprocity ... simultaneously co-determined by their relationship and dependences (in "The History of Madness") ... Agamben in "What is an Apparatus?" extended this notion to the electronics, language, tooling ... where the subject is trapped not only by "institutions, asylum, academia" (from Foucault’s definition), but also by himself through the objects surrounding him ... It is the unrevealed intention of these mythomanias case studies, through our "Vanities," to restore apparatuses in common uses ... to push their over-coding in visible spectrums (Deleuze and Guattari use the concept of over-coding to describe the process whereby singular human actions are integrated into dominant social structures ...).

(2) The term extimacy (extimité), coined by Lacan from the term "intimacy" (intimité), is not the contrary of intimacy. Extimacy says that the intimate is Other — like a foreign body, a parasite.

(3) As Teillard de Chardin already foresaw it, the end of the Holocene is not so much to be attributed to the industrial revolution but to human thoughts which underpin it ... the Noosphere, this manufactured evolutionary planetary period, is to be dated from the Enlightened Century, pre-positivist scientific operation, which by wanting to assail guilty obscurantisms, gave birth
to a proto-capitalist monster (authority of knowledge and discourses). How to judge the City’s mathematical algorithms (sub-prime mortgage crisis & collateralized debt obligations) as well as those of the GAFA (cookies Google-Amazon-Facebook-Apple) as so many systems of influence over the equilibriums of this Anthropocene (remember that Mark Zuckerberg was Awarded the CIA Surveillance Medal as the main Contribution to Monitoring Americans than all other sources combined, and cheaper, too). The re-Terraforming is coming from immaterial, intellectual, scientific and psychic mechanisms.

(4) Ulrich Beck (May 15, 1944 – January 1, 2015) was a German sociologist. His work focused on questions of uncontrollability, ignorance and uncertainty in the modern age, and he coined the terms “risk society” and “second modernity”.

(5) 'Pataphysics / (with a prefix apostrophe): the science of imaginary solutions, from Alfred Jarry. The word was first used in ‘play Guignol’ on April 28, 1893. It’s a kind of pun, pas ta physique (“not your physics”), and pâte à physique (“physics pastry dough”). The “Collège de ‘Pataphysique” was created in 1948 with official members Raymond Queneau, Marcel Duchamp, Chico and Harpo Marx, Man Ray, Eugene Ionesco and unofficial members Jean Genet, John Cage … We could make some analogy and link between 'Pataphysics and Absurdism, as the two faces of the same coin, the farce on one side, the tragedy on the other.

(6) Vanitas is a type of symbolic work of art especially associated with Eros and Thanatos, extremely morbid and explicit, reflecting an increased obsession with decay also seen in the Danse Macabre.

(7) “Science+fiction” can be defined as that branch of literature which deals with the reaction of human beings to changes in science and technology”: from Isaac Asimov, “How Easy to See the Future!”, Natural History, #197, 1975.

(9) … Bataille in ambush, but also Baude-laire, as a proto-Parnassian, in his battle against Hugolian conventions (Victor Hugo and his compassions for the salon, the boudoir and power), Joyce and his sinthomes, his Guyotat and borborygmi, Artaud and his Catatonias … and Houellebecq … contemporary Pornographic Pictura Negras …

(10) … Being not so digital-romantic, not so computation addict, not so eco-masturbator, not socio-moralist … but just architects, snaking in the crack of abuse, idolatry, idiocracy, propaganda, self-complaisance, bio-hoax, social network lure, etc., could we find a crack between the techno-fetishism (post-Palo Alto symptom in the main Anglo-Saxon schools — for neo-liberalism propaganda and tooling-idiocracy), and at the other end, the techno-regression (mainly in all European schools — Social Kreisel toy for noisy moralism, visible as a parade, a disgusting spectacle at the “common ground” Biennale)? Choosing one of these chapels is so comfortable and self-complaisant … there are many benefices to be blind to or to falsify consciousness and knowledge. But both sides are just the two faces of the same coin … a Janus-like reciprocity of personal interest …! At the opposite, techno-sciences should no longer be an Object, but a Subject we have to re-appropriate and corrupt, with “democratic anthropo-technic” strategies (not in an Art-Deco bio-design show for dummies) …

(11) Design, at the opposite of its English definition, which lost its validity this last 20 years to be exclusively determined by performance and rules, “Design is the creation of a plan or convention for the construction of an object or a system,” to quote US Wikipedia … In the French definition, it includes the notion of “dessin/dessein”.

Around 33% of the urban population in the developing world in 2012, or about 863 million people, lived in slums. New York City is believed to have created the world’s first slum, named Five Points in 1825. Those territories could be described as zones of non-droit, informal economy, criminal seeds and organisation, or on the other hand as a bottom-up economy and politics, through local neighbourhood negotiations and the re-questionning of power delegation, depending on which side you find yourself to be.
It would have been the last / leaving my condition unresolved / I would have felt // // showing myself powerless / despite my knowledge // or because of it // now waiting // to validate my tears and testimony of my weakness // self-complaisant-trap // common sense // reason’ / the `sufficient reason’ / the hypothesis of living together // they are late //

This antagonism between believers and philosophers is instrumentalized, according to some, as a civilization war alibi. BUT. Remember the debate during the Enlightenment between Diderot and Kant, between the construction of knowledge from the sciences to the notion of the sublime ... from the Encyclopaedia to the Black Forest, from the philosopher Sri Ganapati Vedeshwar, living in Gokarna, to the Community of Hindu Believers. A true story.

In the 1960s, Lacan was increasingly occupied with two intersecting themes: the issue of how to define and assess the end of a psychoanalysis, and the question of the relationship between psychoanalysis and science. The Pass (La Passe) is a procedure he introduced in 1967 as a means of gathering data on a psychoanalysis and investigating its results.

A language deprivation experiment, also called “The Forbidden Experiment”, consists in isolating infants from ordinary human contact and especially from the normal use of spoken or signed language in the hope of discovering the fundamental character of human nature or the origin of language. Although not designed to study language, similar experiments on non-human primates (the “Pit of Despair”) utilising complete social deprivation resulted in psychosis.

The Air Loom (1810) was a mind control device capable of remotely manipulating the thoughts of its victims. James Tilly Matthews, a Bedlam inmate, believed that a gang of criminals and spies skilled in pneumatic chemistry had taken up residence at London Wall and were tormenting him by means of rays emitted by a machine, via “Lobster-cracking”, preventing the circulation of the blood by a magnetic field, “Stomach-skinning”, and “Apoplexy-working with the nutmeg grater”, involving the introduction of fluids into the skull. Matthews’ delusions had a definite political slant: this gang’s chief targets were leading government figures... by means of their rays they could influence ministers’ thoughts and read their minds.

Butoh, which can be executed with or without an audience, originating from the early movement of ankoku butō (“dance of darkness”), arose within Japanese society after WWII, following a mixture of confusion, caused by the industrialization process of their millenary traditional culture, and horror, caused by the bombs over Hiroshima and Nagasaki. The form was built on a vocabulary of crude physical gestures and uncouth habits... a direct assault on the refinement (miyabi) and understatement (shibui) so valued in Japanese aesthetics.

The Jester Don Diego de Acedo is one of a series of portraits
by Diego Velázquez, transforming the tension and anxiety of the
Spanish court into a carnival freak show, a wounded, distorted,
and blemished representation of the human condition.

The Arbitristas were a group of reformers and writers in 17th-
century Spain, concerned about the decline of the economy.

they worry i’ll
the mountain she-
many before me / want me quiet by their side // a
mcguffin shining in my hands / shining the promise of
the day / for it is today / every year / it is today that
i’m able to die /// when i feel my members freezing /
like so many before me / when i take place among the
chosen ones / among their iced muscles and tendons /
contorted freckles of their skin / fastened in carnal
embrace / a humming swarm / with the crackling noise of
successive congealing / never-endingly i am in weaning
/// meanwhile the train passengers climax indefinitely
// hypothermia for an ultimate hallucination //

Switzerland has legislatively permitted assisted suicide since
1942. A Dignitas clinic near Zürich organizes the pentobarbital
coma and death-sleeping mode. 25% of teenager suicides are
committed contradictorily in winter time, in the snow, via
hypothermia.
Something makes people want to walk, ride or climb to the moun-
taintops – how dangerous an undertaking this may be because of conditions of terrain and weather. It is something completely irrational. Some have themselves brought to the tops of moun-
tains with trains, cable cars and even helicopters. It is often thought that this is to appreciate a sublime, untameable na-
ture, since it has been already the theme of many a sublime Ro-
mantic painting or poem. But in fact most Alpine mountain tops are as artificial as a Dutch polder, not just with the crosses on top, but with mines dug underneath, avalanche protection, restaurants, hotels, ski slopes, ski lifts, half-pipes for snowboarders, artificial lakes to produce artificial snow, a view of the urbanized valley below, and in summer, cows not for the production of milk and meat but for maintenance. All of this is realized only to enable people dressed in special clothes, helmets and harnesses, to throw themselves down again literally as soon as they have arrived on top, using sleighs, skis, snowboards or specially designed and high-tech so-called freeride mountain bikes. They hardly have a choice. It has to go fast. Even the sky is filled with gliders and paragliders, enjoying the turbulence along the slopes. An aspect of dan-
ger, and at least a flirtation with a latent death wish should be involved to feel alive, as a faint memory of older myths. “Everywhere it is machines – real ones, not figurative ones: ma-
chines driving other machines, machines being driven by other machines, with all the necessary couplings and connections,” Deleuze and Guattari write, and between the different machines there are just couplings and passages, “functioning smoothly at times, at other times it fits and starts” (1). The Alps are one big Bachelor Machine, a perpetual carrousel that turns the love for nature into a death mechanism.

Innsbruck, the city where I live, is one of the innovation cen-
tres of Alpine sports. The ‘shadows’ of Bruno Taut and his Al-
pine Architecture are haunting the stations for the funicular railway up to the Hungerburg as glass memories of the shapes that remain after an ice storm. From the Hungerburg a cable car takes people further up to the North Park with the Seegrube and the Hafelekarspitze, just left of which we find a mountain peak called Frau Hitt. According to different sagas, Frau Hitt once was a woman, a giant queen. About why she turned to stone the stories differ but the best-known version tells that she was so stingy, that when a beggar asked for some food, she gave him
a stone instead. So the beggar cursed her, turning Frau Hitt and her horse into stone and leaving her in the place where we can still find her today. In winter she is dressed in snow; in spring she unveils herself to become the unreachable piece of stone she is in summer, alternatively attracting and repelling us. All in all, we can see the landscape of the Nordkette in Innsbruck as a complex ecosystem, which is defined by man and nature in equal parts. It includes the social, the economical and even the incorporeal and invisible systems of language: myths, sagas and fairy tales.

It is no different with the landscape of La Diavolezza, a mountain and skiing area near Pontresina in the Swiss Alps, named after a beautiful fairy-queen who allegedly seduced young huntsmen who saw her bathing in Lej Nair, a frozen lake at the summit of the Bernina Pass. The huntsmen who followed her disappeared mysteriously and somehow one must expect they were frozen to death. Freezing to death is a known method for suicide, described among others in Jack London’s “To Build a Fire”: “... Well, he was bound to freeze anyway, and he might as well take it decently. With this new-found peace of mind came the first glimmerings of drowsiness. A good idea, he thought, to sleep off to death. It was like taking an anaesthetic. Freezing was not so bad as people thought. There were lots worse ways to die ... Then the man drowsed off into what seemed to him the most comfortable and satisfying sleep he had ever known.”(2) Suicide is an issue in Switzerland, as suicide assistance is legal there as long as it does not bring profit. The Swiss Dig-nitas organization legally assists people who want to terminate their own lives — albeit not by freezing to death. For the she-devil haunting Lej Nar, the freezing of the huntsmen was not enough though, and she only left the region when the whole mountain was frozen and covered with a glacier.

Other myths, sagas, fairy tales and literary narratives surround the La Diavolezza area. Thomas Mann’s sanatoriums in Tristan and The Magic Mountain might have been situated here, only accessible by a forgotten branch of the Rhaetian Railway, somewhere high up in the mountains. Paul Scheerbart saw them as logical predecessors of an architecture made entirely out of glass, because they lit the Alps. As such, they were the predecessors of Bruno Taut’s radiating Alpine Architektur, which would crown the mountain tops like an artificial Alpen-
glühen(3). His protagonists thought they might be healed from tuberculosis here, in the time before penicillin was discovered. Most of them died, of course.

Who would be better chosen than New-Territories/François Roche, Camille Lacadée with their friend Pierre Huyghe to explore this place? Their work — architecture, installations, situations, films, props — is characterized by a mixture of the archaic and science fiction, moving between myth-making and 'Pataphysics; schizo-analysis and paranoia. For New Territories, architecture is not just a pragmatic solution for a problem. It is in the extended pragmatism of a specific situation, that its identity and meaning is produced, as a hyper-localism, as Roche calls it, a specific haecceity, an ultimate thisness, a biopsy of a biotope. This biotope is a part not just of a “deep” or “shallow ecology”, but of something like Deleuze’s flat ecology, which opens up the “philosophical subject” to the realm of nonhuman machines, affects, haecceities and what Maturana/Valvera call “structural couplings” (4); or Guattari’s ecosophy, which sees ecology as a complex phenomenon which incorporates human subjectivity, the environment, and social relations (5).

New-Territories produces critical apparatuses in the double meaning of the word. They construct machines that try to reveal disturbances in the systems we are caught up in: misunderstandings, bugs, aberrations, perversions, stutterings. By doing so they also produce critical apparatuses in the sense of footnotes: the critical and primary source material that accompanies an edition of a text. François Roche (whose texts sometimes produce almost the same quantity of footnotes as the texts are long, by the way) writes that “machines also simultaneously produce artefacts, assemblages, multiplicity and desires and infiltrate the ‘raison d’être’ of our own body and mind in the relationship to our own biotopes” (6). Thus the props and McGuffins (7) New Territories make, like the frozen bodies and their miniatures for La Diavolezza, may trigger complex and unpredictable events, which in the end may only exist in our memory or imagination but reveal something about our complex and ambivalent relation to the Alps.
Footnotes

(7) In fiction, a McGuffin is a plot device in the form of some goal, desired object, or other motivator that the protagonist pursues, often with little or no narrative explanation. The specific nature of a MacGuffin is unimportant to the overall plot. See http://en.wikipedia.org/wiki/MacGuffin.

/ the bastard dumped me there / alone on naços / disembarked / that mas-macho gone with my sister / ah / theseus-testosterone / killer of my half-monster-half-brother // betrayal is your nature / am i so naïve / what now / celebration of food and wine / dionysius the alcoholic / turning me into a multi-procreative uterus // trapped time / daedalus been a little more thought-through / wooden cow trick for my mother-copulation / minotaur procreation / tortuous labyrinth / last bath of minos spell / the melting wax-wings // you are the first very architect / composing your mistake-failure with another one and so on /// now i escape from inside / embrace a topological inversion / an infinite fortressless animism / releasing me / congealing me in / my state of limbo-libido / and i pee merrily on my past and my future /

According to Lyotard, every political economy is libidinal: that intensity has no equivalent in currency does not rid the circuits of capital of the force of libidinal investment. Intensive “exchanges” are ignorant of the constitutive negation of both political economy and natural theology since the libido invests unconditionally.

They come ... they enter ... I hear them walking up ... I hear the elevator ... the gates ...
I feel the gaze ... the pupils wandering ... I am immobile ... they came to get lost ... they will become part of it ... as well

Now you cannot see me
- Erethism or erethism mercurialis is a neurological disorder which affects the whole central nervous system, as well as a symptom complex derived from mercury poisoning. This is also sometimes known as the Mad Hatter disease. Historically, this was common among old England felt-hatmakers who used mercury to stabilize the wool in a process called felting, where hair was cut from a pelt of an animal such as a rabbit. The industrial workers were exposed to the mercury vapours, giving rise to the expression "mad as a hatter." Some believe that the character the Mad Hatter in Lewis Carroll's "Alice in Wonderland" is an example of someone suffering from erethism ...

It is commonly characterized through behavioural changes such as irritability, low self-confidence, depression, apathy, shyness and timidity, and in some extreme cases with prolonged exposure to mercury vapours, delirium, personality changes and memory loss occur as a result. People with erethism find it difficult to interact socially with others, with behaviours similar to that of a social phobia.

- Phases = Muscular tension / Blushing / Perspiration / Mouth dryness / Palpitation / Nausea / Restraint / Delirium

- Charles Darwin devoted Chapter 13 of his 1872 The Expression of the Emotions in Man and Animals to complex emotional states including self-attention, shame, shyness, modesty and blushing. He described blushing as "the most peculiar and most human of all expressions."
Diogenes of Sinope was a Greek philosopher and one of the founders of Cynic philosophy. He maintained that all the artificial growths of society were incompatible with happiness and that morality implies a return to the simplicity of nature: “Humans have complicated every simple gift of the gods.” An exile and an outcast, a man with no social identity, Diogenes had nothing but disdain for Plato and his abstract philosophy, he viewed Antisthenes as the true heir to Socrates, and shared his love of virtue and indifference to wealth, together with a disdain for general opinion. Plato once described Diogenes as “a Socrates gone mad.”

Ötzi the Iceman, visible at the South Tyrol Museum of Archaeology in Bolzano, is a well-preserved natural mummy of a Neolithic man who lived around 3300 BCE. His life came to an abrupt end, and his body has been preserved along with much of his clothing and possessions intact.

In biology, the imago is the last stage an insect attains during its metamorphosis, its process of growth and development; it also is called the imaginal stage, the stage in which the insect attains maturity. It follows the final ecdysis of the immature instars. See https://en.wikipedia.org/wiki/Imago.

In Bourgogne (France), the Vouivre (Wyvern) is a chimera, mi terrestrial mi aquatic, living by the eponymous river.

Forecasting logics are no longer able to predict natural catastrophes, those being generated not by natural spasms but resulting from political, industrial and human conjunctions, ... 'Angry' biotopes. Gaia’s furies are countless: Katrina, El Niño, Jeanne, Thomas and Margis, Xynthia, Ewiniar, Fukujima … a series of devastations and uncertainties that our seismographs cannot prevent. Consequently Guattari’s argument is that ‘Environmental ecology,’ as it exists today, has barely begun to prefigure the generalised ecology (noosphere), the aim of which will be to radically decentre social struggles and ways of coming into one’s own psyche …

http://punctumbooks.com

punctum books is an independent, open-access publisher dedicated to radically creative modes of intellectual inquiry and writing across a whimsical para-humanities assemblage. We solicit and pimp quixotic, sagely mad engagements with textual thought-bodies, and provide shelters for intellectual vagabonds.
